

## WORKING PLATFORM ACCESSORIES FOR – (BÖCKER CRANES)

**dp** Böcker Working platform technology.

Our Böcker truck cranes are fitted with additional technology making them adaptable from a crane, to a fully-fledged working platform. All done with incredible ease and without requiring any tools on site. Our working platforms have a payload between 250kg to 100kg. When working in difficult to reach areas, the tiltable platform is particularly well suited. As the platform does not need to be removed to change locations, giving you the ability to slew the crane to different locations whilst working within the platform, Thanks to the automatic levelling system of the platform, you can always work safely and comfortably, no matter what the external circumstances are. Our Böcker platforms are also equipped with a 110v power supply, as standard for your convenience whilst working at height.
